DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement filed 9/13/2004 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

2. The information disclosure statement filed 9/13/2004 fails to comply with 37 CFR 1.98(a)(3) because it does not include a concise explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information, of each patent listed that is not in the English language. It has been placed in the application file, but the information referred to therein has not been considered.

Specification

3. The disclosure is objected to because of the following informalities: the phrase "which applies the surface acoustic wave to the substrate material" beginning on the last line of page 4, and extending into page 5, appears to be missing a word after the word "wave."

Appropriate correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Application/Control Number: 10/507,532 Page 3

Art Unit: 2834

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Nysen et al. (US 6388360).

With respect to claim 1, Nysen et al. discloses a surface acoustic wave sensor comprising a sensor body having a central part and opposite smoothed edge zones outward of the central part; an antenna for the body (Fig 20, item 2002), a transducer for converting electromagnetic waves at the antenna into mechanical waves which run along the sensor body (Fig 19A, item 801); first reflectors on the sensor body and inward of the edge zones for together detecting changes in the spacing between the first reflectors due to change in the body (Fig 19A, items 807, 808, 809, 810); additional reflectors arranged at one of the smoothed edge zones in order to reflect signals which are used for evaluation of the current temperature (column 20, lines 1-7).

Allowable Subject Matter

- 6. Claims 2-4 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 7. The following is a statement of reasons for the indication of allowable subject matter:

The prior art does not disclose or suggest "the smoothed edge zone on which additional reflectors are disposed has a length outward of the central part that corresponds to approximately three times the thickness of the material of the sensor body," "the surface wave acoustic wave sensor … further comprising an adhesive on a surface of the sensor body by which the sensor is mounted on a substrate material to be measured," or "the smoothed edge zone has the surface but is an area without the adhesive" in combination with the remaining claim elements as set forth in claims 2-4.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Derek J. Rosenau whose telephone number is 571-272-8932. The examiner can normally be reached on Monday thru Friday 8:00-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Darren Schuberg can be reached on 571-272-2044. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
